

WASP Wildfire Protection Kits Community Program 2022

WASP Full Kits are available to Fire Departments for \$125 and can be resold for department community fundraising for \$199.95

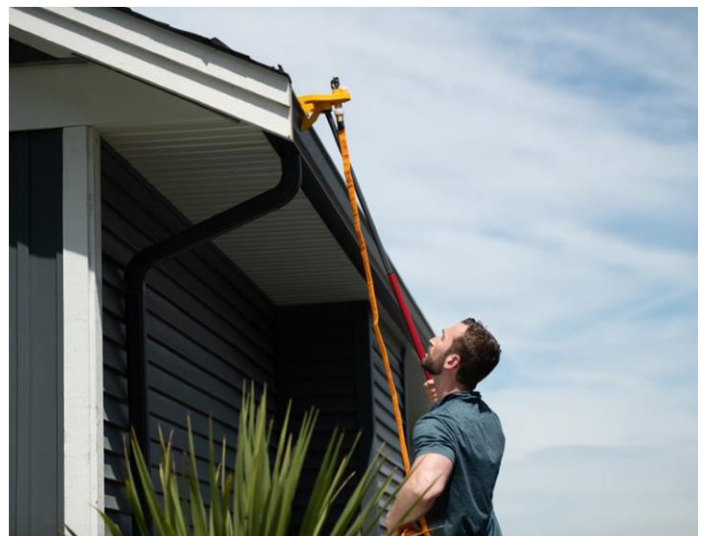

Over 100 Fire Departments have trusted the quality and effectiveness of our patented WASP gutter mount brackets. The Community Fundraising Program has helped fire departments purchase additional equipment while supporting their local communities.

Wasp Gutter Mount Brackets are manufactured in North America with a high-heat resistant plastic and incorporate wind-fighting agricultural-grade sprinkler heads.

Working with the community and fundraising before there is a problem can help firefighter and homeowners before there is an issue. When homeowners have the tools and know what to do, they can evacuate quickly, leaving firefighters to turn on the water if needed.

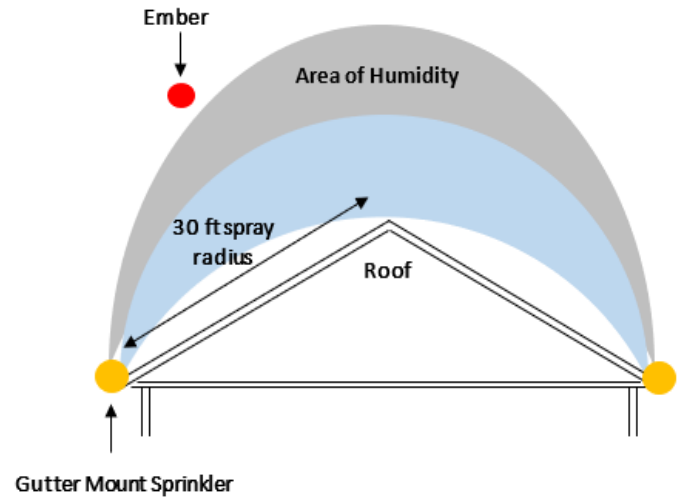

Sprinklers are meant to help by working to create an area of humidity around the structure. Sprinklers offer another tool when firefighters are stretched over multiple tasks.

Since most homes and structures burn from windblown embers, keeping the roof and surrounding area wet can prevent the house from catching fire.

One kit will cover an average size North American home. If needed, additional mounts can be purchased individually. The sprinklers can operate at a very low pressure and are rated at 1.5 – 2.5 US Gallons. per minute.
